6. Focus XAUUSD -- L'or en detail

XAUUSD sur 141 jours: BSL->AL = 45%, SSL->AH = 45%.

Evolution 60j->201j: BSL 48%->45% (-3pp), SSL 30%->45% (+15pp).

Conclusion: L'or converge vers ~45% dans les deux directions. C'est le hasard pur (50%). Le framework Asian BSL/SSL ICT n'a AUCUN pouvoir predictif sur XAUUSD. Les metaux precieux (XAG,XPT,XPD) oscillent entre 45-55%.

Recommandation: Ne pas utiliser les setups Asian sweep sur l'or. Preferer les matieres premieres (CORN,WHEAT,NATGAS: 70-83%) ou les indices US (US2000,US30: 72-76%).
